

IOMAXIS Awarded Two U.S. Patents for Innovations in Smart Device Security

January 24, 2018 08:46 AM Eastern Standard Time

AUSTIN, Texas--(BUSINESS WIRE)--IOMAXIS LLC, a leader in innovative solutions focused on communications, computing and cyber technologies, announced today that it has been awarded two new patents. These patents advance the field of smart device security within the Internet of Things ecosystem. Contributing to the existing IOMAXIS patent portfolio, this work expands the IOMAXIS cybersecurity domain. These two patents also contribute to the IOMAXIS strategy of providing commercial and federal clients unique solutions for protection from emerging technology threats.

“It is important to realize the risks of implementing and adopting new technologies. Our approach is to complement existing technologies to strengthen the overall security components of these critical systems.”

“The common trade-off for rapid product development of smart devices is deficient security. Companies often make development trade-offs to maintain competitiveness and increase profitability, resulting in poor device and system security architectures,” said David Branca, director of research and development at IOMAXIS. “It is important to realize the risks of implementing and adopting new technologies. Our approach is to complement existing technologies to strengthen the overall security components of these critical systems.”

The U.S. Patent and Trademark Office awarded these two patents in December 2017 and January 2018. The patents define a novel approach to accurately implement and manage IoT device communications, security and safety.

“We are continuously developing new methods of innovating and enhancing communications, computing and cybersecurity solutions,” said Brad Buhr, founder of IOMAXIS. “These two patents illustrate our commitment to contributing to the improvement and advancement of not only our technologies, but also those of our customers and partners.”

ABOUT IOMAXIS

IOMAXIS is a nationally recognized leading technology innovator creating disruptive technologies through enhancing, optimizing, and securing technology systems and solutions. IOMAXIS develops and delivers emerging technologies to commercial and federal government clients. For more information regarding these patents, contact David Branca at davidbranca@iomaxis.com.
